Abstract

The present invention relates to methods of ex-vivo expansion of hematopoietic cells by culturing hematopoietic cells in a growth medium comprising a chimera protein which comprises a variant of human interleukin-3 (hIL-3) which contains multiple amino acid substitutions and which may have portions of the native hIL-3 molecule deleted and a hematopoietic growth factor. The present invention also relates to the exvivo expansion of hematopoietic cells for gene therapy. Additionally, the present invention relates to the use of the expanded hematopoietic cells for treating patients having a hematopoietic disorder.
